

TI Coated Diamond And CBN

» 1: Titanium coated with diamond

Product description : In high temperature sintering and high temperature grinding, coating for the diamond on isolation to protect ,prevent the occurrence of graphitization , oxidation or other chemical change , keep the own quale of the diamond , improve the effect of products

Applications: Suitable for metal or vitrified bond products

» 2: Titanium coated with CBN

Product description : High grinding efficiency, high durable degree, easy to trim, ceramic bond materials has the good chemical stability, heat resistance, oil resistance and erosion of Acidproof Alkali, can adapt to all kinds of grinding liquid

Applications : Suitable for vitrified and high temperature metal bond materials

No.	NAME	Description	Grit
